

Micro Materials Ltd move to new custom built facility

Wrexham, 14th April 2008

MML are very pleased to announce the move to our new facility in Wrexham, from which all departments will operate with immediate effect.

The custom built building will afford MML double the floor space previously held, increasing our capacity for both production and development, as well as customer testing and demonstration facilities.

Located close to our previous facility, the new building has been designed with the world leading performance of the MML NanoTest™ system in mind. The environmentally controlled test and demonstration facilities will ensure the system can perform to the best of it's ability, further demonstrating our market edge in terms of system stability and resolution.

New address:
